

metal-zinc-borosilicate glass consists essentially, by weight percent on an oxide basis, of

SiO ₂	55-70%	40-60	(55-60)
Al ₂ O ₃	(0.5-4.5%)	0-7	
B ₂ O ₃	(6-14%)	5-15	
ZnO	(3-10%)	1-10	
Na ₂ O	(5-11%)	3-18	
K ₂ O	2-9%	0-3	(2-3)
Na ₂ O + K ₂ O	(7-20%)	3-21	
Nd ₂ O ₃	at least 5%.	10-30

7. (Amended) A thin sheet of alkali metal-zinc-borosilicate glass containing Nd₂O₃ to reduce the transmission of radiation at a wavelength of 585 nm to a value less than 50%, wherein the alkali metal-zinc-borosilicate glass consists essentially, by weight percent on an oxide basis, of

SiO ₂	55-70%
Al ₂ O ₃	0.5-4.5%
B ₂ O ₃	6-14%
ZnO	3-10%
Na ₂ O	5-11%
K ₂ O	2-9%
Na ₂ O + K ₂ O	7-20%
Nd ₂ O ₃	at least 5%.
